

The process of keeping contact with international patients after discharge

The treating doctor registers the discharge order in patient's medical file

The nurse in charge informs the IPD expert

The IPD expert refers to the inpatient ward

The IPD expert gives the phone number of the treating doctor to the patients so that he/she can get in touch with the doctor any time a problem arises

The IPD expert gives an already-prepared paper on which the different ways of contacting with the center are specified

The IPD expert keeps contact with the patient and follows up her status 24 hours to 1 week after being discharged
